### Applications

### What is EZflow?

EZflow drain product is a 10 foot long slotted pipe surrounded by EZflow Poly-Rock™ (polystyrene aggregate) and enclosed in a geotextile mesh. The patented EZflow Poly-Rock™ aggregate is uniquely engineered with "flow channels" designed to increase void space — and is engineered for improved water flow rates, greater storage capacity and structural integrity to resist compaction and support light vehicular traffic. Combining the pipe, aggregate and mesh in one product reduces the labor costs of installing a French Drain system by 50% or more.
